SUMMARY

Motivated and detail-oriented AI Engineer / Data Scientist with strong foundations in machine learning, data analysis, and software development. Experienced in building predictive models, data-driven solutions, and recommendation systems. Passionate about solving real-world problems using AI and data.

SKILLS

Programming and Tools

- Python (Pandas, NumPy, Scikit-learn)
- SQL
- Jupyter Notebook, Google Colab
- Git, GitHub

Machine Learning and AI

- Supervised & Unsupervised Learning
- Deep Learning (TensorFlow / PyTorch)
- Natural Language Processing (NLP)
- Computer Vision

Data Analysis

- Exploratory Data Analysis (EDA)
- Data Cleaning & Preprocessing
- Data Visualization (Matplotlib, Seaborn, Power BI)

Other Skills

- Problem Solving
- Communication
- Team Collaboration

PROJECTS

1. Retail Demand Prediction & Product Recommendation System(ongoing)

I built a machine learning model to forecast product demand, enabling more accurate inventory planning and trend analysis. Additionally, I developed a recommendation system using collaborative filtering to suggest relevant products to customers. These solutions significantly improved sales insights and supported better data-driven decision-making.

2. Movie Recommender System

Developed a content-based movie recommender system that delivers personalized recommendations based on user preferences and movie features. Implemented data preprocessing and feature extraction techniques to analyze similarities between movies and generate accurate suggestions. Successfully deployed the application on Heroku, providing an interactive platform for users to explore and discover movies, while demonstrating end-to-end machine learning project development.

3. Email Spam Classifier | SMS Spam Classifier

Developed an end-to-end Email and SMS Spam Classifier using machine learning techniques to accurately distinguish between spam and legitimate messages. Performed data preprocessing, text vectorization, and model training using natural language processing (NLP) methods. Evaluated model performance to ensure reliability and deployed the solution on Heroku, enabling real-time spam detection through a user-friendly interface.

4. **Face Mask Detection using CNN**

Developed a Face Mask Detection system using Convolutional Neural Networks (CNN) to classify whether individuals are wearing masks or not in real time. Collected and preprocessed image data, trained a deep learning model for accurate classification, and integrated it with computer vision techniques using OpenCV. The system was capable of detecting faces through a webcam and providing instant feedback, demonstrating practical application of deep learning in public safety.

EDUCATION

Bachelor's Degree in Bsc.CSIT

Orchid International College, Gaushala (Tribhuvan University)

CERTIFICATES

1. AI Mastery Bootcamp 2026: Complete Guide with 1000 Projects (Ongoing)-Udemy

Acquired comprehensive knowledge of AI concepts, including algorithms, models, and intelligent agents. Gained hands-on experience implementing AI solutions in Python across diverse real-world scenarios. Explored advanced AI applications such as autonomous agents, problem-solving techniques, and integration with platforms like MCP and Google A2A, enhancing practical AI development skills.

2. Deep Learning Prerequisites: The Numpy Stack in Python V2-Udemy

Built practical skills in Python-based data analysis and scientific computing using NumPy, SciPy, Pandas, and Matplotlib. Learned to manipulate datasets, perform numerical computations, and create visualizations, forming a strong foundation for machine learning, deep learning, and AI projects.

3. Databases and Introduction to SQL Querying.-Udemy

Built a strong foundation in SQL for data extraction, manipulation, and analysis. Gained hands-on experience in writing complex queries using joins, aggregations, subqueries, and filtering techniques. Developed practical skills in working with relational databases to support data-driven decision-making in machine learning and analytics projects.

ACHIEVEMENTS

1. Built real-world AI projects

2. Developed and deployed a Movie Recommender System on Heroku, providing personalized recommendations based on user preferences.

3. Built an Email and SMS Spam Classifier using NLP techniques, achieving high accuracy in real-time spam detection.

4. Implemented a Face Mask Detection System using CNNs, enabling real-time detection for public safety applications.

5. Created a Retail Demand Prediction & Product Recommendation System, improving sales forecasting and decision-making.

6. Completed 1000+ real-world AI projects, gaining hands-on experience with AI algorithms, models, and agents.

7. Gained expertise in data analysis and visualization using Python libraries such as NumPy, Pandas, SciPy, and Matplotlib.

8. Strong foundation in SQL and database management, enabling efficient data retrieval and analysis for machine learning projects.

9. Successfully deployed multiple machine learning projects on Heroku, demonstrating end-to-end project skills.
